Devotion and Precision

Corp. Office: Shop No. 16, Keshram Market,
Barola Sector-49 Near Metro Station Sector-76,
Noida - 201301 Uttar Pradesh

SINCE - 2016

ABOUT COMPANY

Hare Krishna Engineering, established in 2016 and based in Noida, Uttar Pradesh, is a professionally managed firm specialising in plumbing, sanitary and fire fighting systems. With nearly two decades of industry experience in leadership, we deliver dependable solutions for residential and group housing projects across Noida, Greater Noida and neighbouring regions with efficiency and quality workmanship.

Our company is supported by qualified engineers, supervisors and modern machinery to ensure smooth project execution and timely completion. We have successfully handled multiple large-scale developments and continue to serve reputed developers with professionalism, safety standards and strong on-site coordination across Uttar Pradesh, Haryana and Punjab.

VISION & MISSION

Vision

To deliver high-quality plumbing, sanitary and fire fighting solutions with precision, safety and timely execution. Hare Krishna Engineering is committed to maintaining professional standards, skilled workmanship and efficient project coordination, ensuring reliable services that meet the expectations of developers, contractors and residential housing projects across North India.

Mission

To become a trusted and recognised contracting firm in plumbing and fire protection systems across Uttar Pradesh and neighbouring states. We aim to strengthen our presence in large-scale residential and commercial projects through continuous improvement, technical excellence and long-term client relationships.

Hare Krishna Engineering believes that strong values and clear direction are essential for sustainable growth. Our mission and vision reflect our commitment to quality workmanship, professional integrity and dependable project execution. By focusing on safety, technical precision and timely delivery, we strive to build lasting relationships with developers and contribute meaningfully to infrastructure development across North India.

SINCE - 2016

WHY CHOOSE US

01

We have Completed 50+ projects, With satisfactory Service.

02

HKE has a reputation for delivering high quality construction projects.

03

We use only the branded **materials and techniques** to complete project.

10

HKE has a transparent and **client-friendly** process that ensures that the client is always informed about the progress of the project.

04

We Have a strong team of young and experienced **Civil Engineers, Fire Fighters, Plumbers.**

05

Long -Terms Relationship with Clients, Our Focus to Provide 100% Satisfaction.

06

We have proven track record of delivering exceptional designs for **large-scale, complex projects.**

11

HKE has an experienced team of **architects, engineers, and Plumbers** who have worked and successfully completed a range of projects.

07

India's No.1 Contractors & Civil Services Firm last 15 years of Experience!

08

Experienced & Dedicate Team, they have more then 10 years of experience.

09

We are committed to provide projects at **given time period.**

OUR SERVICES

PLUMBING SERVICES

Sometimes our washbasin or kitchen sink trouble. In this situation, people are facing lots of problems. In this situation, we need skilled Plumbing and Sanitary Works Contractors who have solved our problems at a given time. Like that plumbing problem, we are facing more difficulties with drain blockage, drain overflow. These types all problems we need the best plumber that provides us valuable price services.

We know drain is the one leading way to water input. Hence always clean drain is the first priority for us. But sometimes drain was block this situation people's faces lots of difficulties. Resolving like that situation we need to plumber services which provide you better service at a given time.

WATER TREATMENT PLANT

We know how water best part of our life. Because if water does not in the earth then lots of animal and peoples are finished. Our earth has lots of water but day by day the water level is down. Hence if we are alive then we have needed lots of Water Treatment Plants. Hence most of the engineering team decided to save rainwater and build a water treatment plant that filters rainwater and makes drinking water.

Hence in this modern era, lots of countries install their Land water treatment plant. Because water treatment plants help the government to provide safe drinking water from filter rainy waters. By the way, in this modern era, lots of engineers make small water treatment plants for covering small areas like -village, and small population areas.

SEWERAGE TREATMENT PLANT

Onsite (or decentralized) wastewater treatment systems are used to treat wastewater from a home or business and return treated wastewater back into the receiving environment. They are typically referred to as septic systems because most involve a septic tank for partial treatment. We need to Sewage Treatment Plants.

The most common and traditional septic systems consist of a septic tank that gravity flows to a soil adsorption field for final treatment and dispersal. The septic tank allows particulate matter to settle to the bottom of the tank so that large solids do not plug the drain field.

An effluent screen placed in the outlet of the septic tank is used to filter suspended solids out of the effluent. Final treatment and dispersal of the wastewater take place in the soil adsorption field.

OUR SERVICES

EXTERNAL SERVICES

We know Pipe is the necessary item for our residential and commercial homes and shops. If you are planning to build your homes then you need a plumber because before whitewash in the home needs water distribution pipes that distribute water from in the house many locations such as kitchen, bathroom, room, garden, etc. hence Pipe Installation Work Contractors finish before whitewash. Lots of residential and Commercial Constructed building needs plumber that installs pipe in the full buildings. Isometric drawings include equal drawings with precise dimensions represented, line numbers, pipe insertion, valves, flanges, special parts, tables including a list of all items included in the drawings, etc.

FIRE FIGHTING SYSTEM

We know fire which is a danger for our health and our homes. Sometimes you see in the news channel's some location has damage for cause is fire. Hence always be alert if you are in homes and commercial spaces. Some people if construct their house and commercial shop but they can't protect their house from fire accident cover. If you are planning to build your residential homes and commercial spaces shop always take advice from Fire Fighting Works contractors.

FIRE ALARM SYSTEM

A fire alarm system is a system that includes signaling-alarm devices that automatically detect and communicate fire information. Fire alarm systems are designed to work in a variety of environments. They should be physically fit during the operation.

GARDEN IRRIGATION SYSTEM

Garden watering systems work by carrying water around the garden in a series of irrigation supply pipes connected to a water source (usually a standard outside tap). When you have the irrigation supply pipe running past all of the plants you wish to water, you then connect water outlets to the pipe matrix to regulate the release of water.

OUR PROJECTS

Our projects demonstrate our strong capability in executing plumbing, sanitary and fire fighting system works for residential and group housing developments. Hare Krishna Engineering is currently handling multiple ongoing projects across Noida, Greater Noida and nearby regions, where we ensure structured planning, efficient resource management and adherence to approved technical standards. With experienced supervision and modern equipment, we maintain consistent quality and safety throughout every phase of project execution.

Over the years, we have successfully completed numerous assignments across Uttar Pradesh, Haryana and Punjab for recognised developers and housing societies. Each completed project reflects our commitment to timely delivery, professional coordination and dependable workmanship. From installation to testing and commissioning, we focus on precision and compliance, ensuring long-term functionality and client satisfaction in every development we undertake.

COMPLETED PROJECTS

S.N.	Project Name	Location	Description	Value (Lakhs)	Status
1	EMAAR	Sec-105, Mohali	Plumbing & Sanitary work	35.00	Completed (2020)
2	Krishna Aphrenia	Ghaziabad	Plumbing & Sanitary work	43.00	Completed (2020)
3	Super City	Greater Noida	Plumbing & Sanitary work	90.00	Completed (2021)
